

- Track your vehicles in real time
- Identify bad driver behaviour
- Prevent unauthorised vehicle use or theft
- Reduce fuel and maintenance bills
- Designed for high demand applications

Overview

The SuperTrack 4100/PRO is a cutting edge, affordable and highly scalable vehicle tracking device. It will remotely track and monitor vehicles in real time.

Functions

Regular status reporting

The 4100/PRO collects information from the vehicle including its position, speed and ignition status and transmits this information at 60 second intervals.

Inputs monitoring

The status of up to five other vehicle inputs such as door sensor, cargo temperature, panic button or other devices can also be monitored.

Event-triggered alerts

- The 4100/PRO can automatically send an alert when:
- The vehicle enters or exits a geofenced zone (virtual boundary in a real-world geographic area)
- The vehicle exceeds preset speeds

Alerts can be automatically triggered for any other vehicle inputs such as a change in a preset temperature detected by a cargo temperature sensor.

Remote immobilisation

Vehicles can be remotely immobilised in the event of vehicle theft or unauthorised use. T-4100/PRO Advanced Vehicle Tracking System Built-in serviceability

The 4100/PRO has full over-the-air configuration capabilities including upgrading and remote diagnostics.

Device polling

The vehicle's status (and the status of any additional inputs) can be requested at any time from the SuperTrack on-line software.

Scalability

Through an optional add-on module, the 4100/PRO can accommodate up to 16 inputs. The add-on module will also allow the 4100/PRO to integrate with other peripheral devices such as a laptop, PDA, satellite navigation system or barcode reader.

Vehicle suitability

The 4100/PRO is designed for all types of fleets from cars to light and heavy goods vehicles, covering any vehicle which requires comprehensive tracking, reporting and security capabilities.

Power

The operational voltage of the 4100/PRO is 10v to 32v. The unit is powered by direct connection to the vehicle's battery.

Extras

- Dallas key
- Dallas key reader
- Impact sensor

Highlights

- Small and easily concealable
- Extremely reliable
- Backup battery
- Rugged and weatherproof
- Suitable for most vehicle types
- Industry leading U-Blox GPS module for high signal reception, sensitivity and accuracy
- Unlimited number of geofences
- Monitor up to five additional inputs
- Optional expansion module to monitor an additional 20 inputs as well as the ability to export data to external devices such as laptops and PDAs
